

Northeast Florida Airport St. Augustine, FL

Project Description:

MDG provided construction inspection services for two separate projects:

- Spoil Island Removal: Project involved the removal and hauling of fill material from a dredge spoil island located near the airport. Project included the design and later removal of a temporary road with minimum impact to sensitive wetlands.
- Taxiway B Construction: Project involved removal of large amounts of unsuitable material, installation of mass stabilization and stormwater collection and conveyance systems. These systems included geogrids, geofabrics, and geofoam.

Inspection services also included weekly and storm event erosion control inspections.

Project Manager: *Scott Knowles, P.E.*
