

PROJECT PROFILE

Key Project Elements

- Stormwater facility design
- Site and utility design
- Permitting with St. Johns County, City of St. Augustine, FDEP, and SJRWMD

Owner

St. Johns County

MDG's Role

Prime engineering consultant

Status

Completed 2015

Matthews Design Group (MDG) provided engineering services for the new Health & Human Services facility located near the St. Johns County office complex. Completed in three phases, the project encompasses over 40,000 square feet of building footprint on a 16-acre site. Project scope included complete civil site design, stormwater and utilities infrastructure design, and permitting with the city of St. Augustine, Florida Department of Environmental Protection (FDEP), and St. Johns River Water Management District (SJRWMD). The stormwater facility for this project was designed to be both functional and to be an amenity for the site. The treatment system includes a wet detention pond paired with two bioretention ponds, providing diversity of landscaping to the site.
